

 **Fully compliant with The Building (Amendment) Regulations 2018:**
The Government's ban on combustible materials in external walls, following a review of fire safety in high-rise residential buildings

We are one team. We are Leviat.

Leviat is the new name of CRH's construction accessories companies worldwide.

Under the Leviat brand, we are uniting the expertise, skills and resources of Ancon and its sister companies to create a world leader in fixing, connecting and anchoring technology.

The products you know and trust will remain an integral part of Leviat's comprehensive brand and product portfolio.

As Leviat, we can offer you an extended range of specialist products and services, greater technical expertise, a larger

and more agile supply chain and better, faster innovation.

By bringing together CRH's construction accessories family as one global organisation, we are better equipped to meet the needs of our customers, and the demands of construction projects, of any scale, anywhere in the world.

This is an exciting change. Join us on our journey.

Steel-to-Steel Balcony Connectors

Ancon SSTS and STS are compact thermal breaks, typically used for connecting steel balconies to structural steel frames but which are equally suitable for other steel-to-steel applications.

The connectors comprise tension and compression components within a single combined unit, wrapped in class A1 non-combustible mineral wool insulation. The fabricated compression component is manufactured from either 1.4301 (grade 304) stainless steel referenced SSTS or hot-dip galvanised S355 plain carbon steel referenced STS. Stainless steel offers the greater thermal efficiency and is essential for applications requiring enhanced corrosion protection such as coastal areas.

The fabricated elements are designed to EN 1993 (Eurocode 3) and CE marked to BS EN 1090 Part 1.

The system is available in three standard stud sizes to accommodate a wide range of loads. Manufactured to order, the vertical centres of the four A4 stainless steel fixing studs can be specified to suit the exact requirements of the application.

A thermal plate, with an independently verified European reaction-to fire classification of A2-s1,d0, is located at each steel interface.

Design resistances are provided on page 4.

System Benefits

- ✓ Comprises materials of class A1/A2 combustibility only, ideal for high-rise construction
- ✓ Proven through thermal modelling to reduce heat loss and eliminate condensation risk
- ✓ Thermal pad located at each steel interface
- ✓ Bracket fabrication CE marked to BS EN 1090-1
- ✓ Variable fixing heights to suit application
- ✓ In the case of SSTS, fully stainless steel components offer the ultimate corrosion protection and thermal efficiency benefits

Material Combustibility

Following a review of fire safety, the Government has banned the use of combustible materials in the external walls of high-rise residential buildings in England. The Ancon SSTS and STS connectors are fully compliant with the material combustibility requirements of The Building (Amendment) Regulations 2018. All components are either European classification A1 or A2-s1,d0. Contact Leviat for further information.

Thermal Performance

Thermal modelling of a typical application showed a reduction in heat loss of almost 50% compared to a direct steel connection. It also illustrated a temperature factor within the limits detailed in BRE document IP1/06 for eliminating condensation risks in buildings of any type, even those with high humidity e.g. swimming pools (0.90).

Dimensions

Product Reference	W	A	B	Dimension (mm)			E	F
				C	D			
SSTS/STS 16A	180	40	100	30	40	24 A/F	M16	
SSTS/STS 20A	180	40	100	30	40	30 A/F	M20	
SSTS/STS 24A	190	37.5	115	40	45	36 A/F	M24

Installation Guidance

The SSTS/STS Balcony Connector is supplied in a single unit with thermal plates attached to both inner and outer faces. These plates should not be removed. The assembly features all necessary steel fixings. Care should be taken to avoid damaging any balcony connector components prior to and during installation. It is essential that the connector is orientated and installed correctly.

Prior to installation of the connector, it is important to check the product dimensions against the engineer's drawings, specifically ensuring the mating parts match the connector stud centres.

The SSTS/STS Balcony Connector should be orientated so that the label indicating the uppermost face is correctly positioned and is facing out of the building.

Position the connector close to where it is to be installed. Ensure the connector is stable and not likely to fall. Carefully remove the nuts and washers from the studs on the inner face. Keep the steel nuts and steel washers close to hand. All non-metallic packing around the fixings should be discarded at this point, leaving the heat-shrunk isolation material on the stainless steel stud. Carefully lift and fit the exposed studs through the appropriate holes in the building structure. Do not force the connector into position. Re-fit the steel washers and steel nuts. Once the connector is fully aligned with the structure, torque up the nuts with a calibrated hydraulic torque wrench and suitable socket, referencing the table below.

Connector	SSTS/STS 16A	SSTS/STS 20A	SSTS/STS 24A
Wrench Size (A/F)	24	30	36
Torque (Nm)	148	288	498

Once all connectors are correctly positioned and fitted to the building structure, the balcony beams can be installed.

Remove the nuts and washers from the outer face of the connector and keep close to hand. Discard all non-metallic packing around the fixings to expose the heat-shrunk isolation on the stud.

Carefully lift the balcony fabrication, ensuring the balcony is horizontal. Align the balcony and carefully push over the exposed studs. Do not force it into position.

When positioned, re-fit the steel washers and steel nuts.

Once the balcony is fully aligned with the connector and structure, tighten the nuts to the correct torque. Remove all lifting straps.

Design Resistances

Design Example

Known requirements:

The Factored Ultimate Shear Force per connector, V_{Ed} , is 75kN.
 The Factored Ultimate Moment per connector, M_{Ed} , is 45kNm.
 Vertical bolt centres are limited to a maximum of 150mm

From the tables:

- ✗ STS16A at 150mm centres gives $V_{Rd} = 60.75$ kN and $M_{Rd} = 27.14$ kNm
 These connectors do not give the required capacity
- ✗ STS20A at 150mm centres gives $V_{Rd} = 60.75$ kN and $M_{Rd} = 42.33$ kNm
- ✓ STS24A at 150mm centres gives $V_{Rd} = 78.1$ kN and $M_{Rd} = 45.53$ kNm.
 This connector meets the project requirements

Known requirements:

The Factored Ultimate Shear Force per connector, V_{Ed} , is 58kN
 The Factored Ultimate Moment per connector, M_{Ed} , is 35kNm
 Vertical bolt centres are limited to a maximum of 150mm

From the tables:

- ✗ SSTS16A at 150mm centres gives $V_{Rd} = 39.36$ kN and $M_{Rd} = 27.14$ kNm
- ✗ SSTS20A at 150mm centres gives $V_{Rd} = 39.36$ kN and $M_{Rd} = 29.73$ kNm
 The above connectors do not give the required capacity
- ✓ SSTS24A at 150mm centres gives $V_{Rd} = 61.1$ kN and $M_{Rd} = 37.25$ kNm
 This connector meets the project requirements

Leviat occasionally supply:

- Special units with compression components top and bottom to accommodate uplift forces
- Special heavy duty units with multiple tension components and / or compression components

Ancon standard balcony connectors are designed to offer innovative solutions for a variety of load cases and construction geometries.

For arrangements not covered by the standard connectors, bespoke engineered solutions are available upon request. Please contact our technical team to discuss your requirements.
